LEARNING / ASSIGNMENT OF IP

AIM:

To understand the IP addressing scheme & manually asign static IP addresses to computers on a network.

PROCEDURE:

1) In windows:

Open network & sharing centre → change adapter setting → local area connection → properties → IPV4 → set IP manually.

2) Enter IP: 192.168.1.10

3) Subnet mask: 255.255.255.0
Default gateway: 192.168.1

3) Enter DNS: 8.8.8.8, click Ok.

4) In LINUX,

Use command: 'sudo ip addr add 192.168.1.10/24 dev eth0'

5) Set gathway: sudo ip route add default via 192.168.1.1'

6) Verify: 'ipconfig' or 'ip a'

7) Pings the default to confirm network connectivity.

8) Ping another computer on the same subnet to verify communication.

COMMANDS:

sudo ip addr add 192.168.1.10/24 dev eth0.
sudo ip route add default via 192.168.1.1
ip a show eth0
ping 192.168.1.1
nmcli con mod 'Wired connection 1' ipV4.addresses 192.168.1.10/24
nmcli con mod 'Wired connection 1' ipV4.method manual
nmcli con up 'Wired connection 1'

RESULT:

Static IP addresses were successfully assigned to computers. Connectivity was verified using ping commands between hosts
